Summary Overall

Summary of the Objectives
Die Anforderungen an einen HWRM-Plan sind in Artikel 7 und im Anhang der HWRM-RL aufgeführt und durch § 75 WHG in deutsches Recht umgesetzt. Die HWRM-Pläne berücksichtigen alle Aspekte des Hochwasserrisikomanagements, wobei der Schwerpunkt der Pläne auf einer Verringerung potenzieller nachteiliger Hochwasserfolgen für die Schutzgüter und sofern angebracht, auf nichtbaulichen Maßnahmen der Hochwasservorsorge und/oder einer Verminderung der Hochwasserwahrscheinlichkeit liegt. Dabei werden die besonderen Merkmale des betreffenden Einzugsgebietes bzw. Teileinzugsgebiets berücksichtigt und bei der Entwicklung von angemessenen Zielen und Maßnahmen beachtet. Entsprechend den Anforderungen der HWRM-RL und des WHG wurden in den HWRM-Plänen angemessene Ziele für das Risikomanagement zur Verringerung potenzieller nachteiliger Hochwasserfolgen für die Schutzgüter (Rezeptoren) menschliche Gesundheit, die Umwelt, das Kulturerbe und wirtschaftliche Tätigkeiten festgelegt. Für das Hochwasserrisikomanagement in Deutschland wurden in der LAWA folgende grundlegende Ziele festgelegt (Empfehlungen zur Aufstellung von HWRM-Plänen http://www.wasserblick.net/servlet/is/142658/Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf?command=downloadContent&filename=Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf, 26./27.09.2013): - Vermeidung neuer Risiken (im Vorfeld eines Hochwassers) im Hochwasserrisikogebiet, - Reduktion bestehender Risiken (im Vorfeld eines Hochwassers) im Hochwasserrisikogebiet, - Reduktion nachteiliger Folgen während eines Hochwassers, - Reduktion nachteiliger Folgen nach einem Hochwasser. Ausgehend von diesen grundlegenden Zielen erfolgte die weitere Zielfestlegung gemäß dem Subsidiaritätsprinzip auf Ebene der für die HWRM-Planung zuständigen Akteure im Zusammenhang mit der Identifizierung der Maßnahmen. Sie umfassen die Aspekte Vermeidung, Schutz, Vorsorge, Wiederherstellung/Regeneration und Überprüfung. Mit den genannten Zielen wird eine Verminderung nachteiliger Folgen für alle Schutzgüter angestrebt. In den HWRM-Plänen werden neben den angemessenen Zielen für das Hochwasserrisikomanagement auch Maßnahmen zusammenfassend dargestellt, die alle Aspekte des Hochwasserrisikomanagements umfassen und mit deren Hilfe diese Ziele erreicht werden sollen. Dies betrifft schwerpunktmäßig nichtbauliche Maßnahmen der Hochwasservorsorge, aber auch technische Maßnahmen. Für Deutschland wurde von der Bund-Länder-Arbeitsgemeinschaft Wasser (LAWA) zur Vereinheitlichung der Berichterstattung ein Maßnahmenkatalog entwickelt (http://www.wasserblick.net/servlet/is/142651/WRRL_2.3.3_Massnahmenkatalog_Anlage_24.01.2014.pdf?command=downloadContent&filename=WRRL_2.3.3_Massnahmenkatalog_Anlage_24.01.2014.pdf, 24.01.2014), in dem alle Maßnahmen den Aspekten des Hochwasserrisikomanagements und den Maßnahmenarten entsprechend der europäischen Definition zugeordnet sind. Weiterhin wurden die vorher geltenden deutschen Handlungsfelder den Aspekten und Maßnahmenarten zugeordnet. Die Maßnahmen in den unterschiedlichen LAWA-Handlungsfeldern sind geeignet, zur Verringerung oder Vermeidung von Risiken bei allen in der HWRM-RL genannten Schutzgütern beizutragen. Basis für die Identifizierung geeigneter Maßnahmen ist die Ermittlung und Bewertung des derzeitigen Hochwasserrisikos im Sinne eines Ist-Ziel-Vergleiches im Hinblick auf die Risikosituation für die Schutzgüter bzw. auf den bisherigen Umgang mit den Hochwasserereignissen. Der Ist-Ziel- Vergleich bzw. die Zustandsbewertung ist Grundlage für die Ermittlung des Handlungsbedarfs. Die Rangfolge der Maßnahmen wird durch die drei Kategorien sehr hoch, hoch und moderat dargestellt. Die Rangfolge der Maßnahmen wurde nach den Aspekten Wirksamkeit der Maßnahme, Umsetzbarkeit, finanzielle Ressourcen, Umsetzungszeit sowie Synergieeffekte mit anderen Richtlinien erarbeitet. Die Reihenfolge der Nennung der Kriterien stellt keine Gewichtung dar. Bei der Bildung der Rangfolge sind in der Diskussion mit den verantwortlichen Akteuren die Kriterien betrachtet und abgewogen worden, das Ergebnis hing von den Verhältnissen und Rahmenbedingungen vor Ort ab. Der Aspekt der Wirksamkeit der Maßnahmen bezieht sich dabei auf die Erreichung der o. g. Ziele für die Schutzgüter. Für die Bewertung der Umsetzbarkeit sind auch die aufgrund rechtlicher Vorgaben bestehenden Pflichtaufgaben berücksichtigt worden. Weiterhin beeinflussen langwierige Genehmigungsverfahren (Zeit, Personal) oder sonstige Schwierigkeiten (z. B. Betroffenheit von Schutzgebieten, hoher Aufwand für Ausgleichsmaßnahmen etc.) die Realisierbarkeit. Weiterhin sind Synergieeffekte mit anderen Richtlinien ein Gesichtspunkt für die Festlegung der Rangfolge der Maßnahmen. Im LAWA-Maßnahmenkatalog ist zur Berücksichtigung des Art. 9 der HWRM-RL eine Eingruppierung der Maßnahmen in die Stufen M1, M2 und M3 vorgenommen worden. M1: Maßnahmen, die die Ziele der jeweils anderen Richtlinie unterstützen. M2: Maßnahmen, die ggf. zu einem Zielkonflikt führen können und einer Einzelfallprüfung unterzogen werden müssen. M3: Maßnahmen, die für die Ziele der jeweils anderen Richtlinie nicht relevant sind. Die Erläuterung dieser Maßnahmenstufen M1, M2 und M3 ist im Hintergrundpapier unter Kap. 2 (http://www.wasserblick.net/servlet/is/142658/HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf?command=downloadContent&filename=HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf, 24.02.2015) enthalten. Die Maßnahmenplanung in der Flussgebietsgemeinschaft (FGG) Elbe erfolgte ausgehend von den grundlegenden Zielen der LAWA. Darauf aufbauend erfolgte eine weitere Konkretisierung hin zu den angemessenen Zielen auf den nachfolgend genannten Ebenen: - Erfüllung der gesetzlichen Anforderungen - Umsetzung fachpolitisch-strategischer Zielsetzungen - Berücksichtigung der Interessen von regional zuständigen Akteuren. Gesetzliche Anforderungen sind zum Beispiel: - Festsetzung von Überschwemmungsgebieten innerhalb der Risikogebiete nach § 76 Abs. 2 WHG. - Ausweisung von Vorrang- und Vorbehaltsgebieten für den vorbeugenden Hochwasserschutz auf Grundlage der Raumordnungsgesetze des Bundes und der Länder. - Nach § 5 BauGB sind kommunale Planungsträger verpflichtet, die in den Hochwassergefahrenkarten und Hochwasserrisikokarten dargestellten Risikogebiete in ihre Planwerke zu übernehmen. - Sicherstellung der örtlichen Gefahrenabwehr und des Katastrophenschutzes entsprechend der Katastrophenschutzgesetze. - Vorhaltung und ständige Fortentwicklung der Hochwasservorhersage- und -warndienste auf Basis der rechtlichen Vorgaben des Bundes und der Länder. - Gewährleistung der ordnungsgemäßen Unterhaltung von Hochwasserschutzanlagen und Gewässern entsprechend der rechtlichen Vorgaben des Bundes und der Länder. - Erfüllung der Betreiberpflichten, die sich unter anderem aus der VAwS, dem BImSchG und dem Atomgesetz ergeben. - Nach § 5 Abs. 2 WHG ist jede Person im Rahmen des ihr Möglichen und Zumutbaren verpflichtet, geeignete Vorsorgemaßnahmen zum Schutz vor nachteiligen Hochwasserfolgen und zur Schadensminderung zu treffen. Fachpolitisch-strategische Zielsetzungen ergeben sich unter anderem aus den Beschlüssen der Sonder-Umweltministerkonferenz vom 02.09.2013 sowie aus der Elbministerkonferenz vom 05.12.2013 in Folge des Hochwassers 2013 (http://www.fgg-elbe.de/ministerkonferenzen-der-fgg/id-6-emk.html, Stand: 27.05.15) wie folgt: - Notwendigkeit, dem Hochwasserschutz Priorität bei der Flächennutzung einzuräumen. - Einrichtung zusätzlicher Rückhalteräume unter folgenden Prämissen: - Überschwemmungsgebiete müssen durch ein langfristiges Flächenmanagement auch künftig in ihrer Funktion erhalten werden. - Flussräume sollen ausgeweitet werden. Dabei bietet insbesondere die Rückverlegung von Deichen erhebliche Synergiepotentiale mit Zielen des Naturschutzes. Noch wirksamer für den Hochwasserschutz sind steuerbare Flutpolder zur gezielten Kappung von Hochwasserscheiteln. - Retentionsmöglichkeiten sind auch in vom Hochwasser selbst weniger bedrohten,

geeigneten Flächen in den Einzugsgebieten der Mittel- und Oberläufe zu schaffen (Rückhalt in der Fläche). - Landwirtschaftliche Nutzflächen müssen künftig stärker zur Retention und als Flutpolder einbezogen und die Zusammenarbeit mit der Landwirtschaft gestärkt werden. - Dem Hochwasserrisiko ist insbesondere auch durch Minderung der Schadenspotentiale in den überschwemmungsgefährdeten Gebieten zu begegnen. Der Wiederaufbau nach großen Hochwasserschäden soll an neuralgischen Stellen vermieden werden. Auch sollten für dünn besiedelte Polderflächen geeignete Umsiedlungsstrategien geprüft werden. - hochwasserangepasstes Planen, Bauen und Sanieren als ein weiterer Bestandteil des präventiven Hochwasserschutzes - Nutzungsaufgabe der gefährdeten Flächen wie beispielsweise eine Umsiedlung in letzter Konsequenz zur vollständigen Reduzierung des Schadenspotenzials. - Verbesserung des präventiven Hochwasserschutzes, insbesondere die Gewinnung von Rückhalteräumen mit signifikanter Wirkung auf die Hochwasserscheitel, und zur Beseitigung von Schwachstellen bei vorhandenen Hochwasserschutzmaßnahmen (Nationales Hochwasserschutzprogramm). - Entwicklung von Instrumentarien zur Stärkung von Maßnahmen der Eigenvorsorge (Elementarschadensversicherung) - zügige Umsetzung von Hochwasserschutzmaßnahmen - konsequente Fortführung von Maßnahmen zur Rückverlegung von Deichen und zur Errichtung von steuerbaren Flutpoldern, Talsperren und Rückhaltebecken - Gewinnung weiterer Retentionsräume an der Elbe und ihren Nebenflüssen. - Optimierung und Weiterentwicklung der Hochwasservorhersage - Überprüfung und ggf. Fortschreibung der Bemessungsgrundlagen - Ggf. Schaffung bautechnischer Reserven bei der Bemessung von Hochwasserschutzanlagen. Die Interessen regional zuständiger Akteure werden maßnahmenbezogen ergänzend berücksichtigt. Ausgehend von diesen grundlegenden Zielen erfolgt die weitere Zielfestlegung auf Ebene der sachlich und örtlich zuständigen Akteure im Zusammenhang mit der Identifizierung der Maßnahmen. Dies sind unter anderem die Länder, regionale Träger, Kommunen und Verbände, die auch für die Umsetzung der Maßnahmen verantwortlich sind. Eine Darstellung, wie sich die grundlegenden Ziele auf die Folgen für die einzelnen Schutzgüter auswirken, ist der Tabelle 4.1 des Hochwasserrisikomanagementplans der FGG Elbe (http://www.fgg-elbe.de/hwrm-rl/hwrm-plan.html?file=tl_files/Downloads/HWRM_RL/anh/hwrmp/2015/Entwurf_HWRMP_Elbe.pdf, 22.12.2015) bzw. Punkt 3 des Hintergrundpapiers für die LAWA-Textbausteine für das Reporting der HWRM-Pläne (http://www.wasserblick.net/servlet/is/142658/HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf?command=downloadContent&filename=HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf, 24.02.2015) zu entnehmen, in der die Zuordnung der LAWA-Handlungsfelder und EU-Maßnahmenarten zu den grundlegenden Zielen und Schutzgütern erfolgt. Die FGG Elbe hat sich darauf verständigt, die Maßnahmenauswahl auf der Basis des gemeinsamen LAWA-Maßnahmenkataloges durchzuführen. Zur Erreichung der festgelegten Ziele wurden auf Ebene der Bundesländer Maßnahmen zur Reduzierung der Hochwasserrisiken in den Gebieten festgelegt, in denen ein potenzielles signifikantes Hochwasserrisiko besteht oder für wahrscheinlich gehalten werden kann (§ 73 WHG i. V. m. Art. 5 HWRM-RL) sowie für Gebiete, für die nach Art. 13 HWRM-RL Übergangsmaßnahmen in Anspruch genommen wurden. Die Ziele dienen schutzgutübergreifend der Vermeidung und Verringerung nachteiliger Hochwasserfolgen. Sie beziehen alle Aspekte eines Hochwasserrisikomanagements ein und gelten für die gesamte Flussgebietseinheit und für jedes darin enthaltene Risikogebiet. Die Aufstellung des HWRM-Plans der FGG Elbe ist ein Prozess, in dessen Verlauf konkrete Maßnahmen identifiziert werden, die je nach regionalen und lokalen Gegebenheiten in sehr unterschiedlichen Zeitabläufen umgesetzt werden. Da viele Akteure parallel arbeiten, war es nicht zweckdienlich, eine sequentielle Rangfolge zu erarbeiten, nach der eine Maßnahme nach der anderen umgesetzt wird. Im sächsischen Anteil am Flussgebiet Elbe lagen mit den Hochwasserschutzkonzepten (HWSK) bereits zum 22.12.2010 Pläne zum Umgang mit dem Hochwasserrisiko vor, die den inhaltlichen Anforderungen des Art. 6 und 7 der HWRM-RL entsprachen. Diese wurden deshalb auf der Grundlage von Art. 13 Abs. 1-3 HWRM-RL weiter verwendet.

Summary of the Aspects

Die HWRM-Pläne verfolgen einen interdisziplinären Ansatz und wurden unter aktiver Beteiligung interessierter Stellen erstellt (Art. 10 (2) HWRM-RL bzw. § 79 Abs. 1 WHG). Damit ist sichergestellt, dass die gesamte Bandbreite der Maßnahmen des Hochwasserrisikomanagements entsprechend den örtlichen Möglichkeiten und Notwendigkeiten bei der Aufstellung der HWRM-Pläne berücksichtigt wurde. Im Rahmen des CIS-Prozesses wurde zur Vereinheitlichung der Berichterstattung eine Vorgabe für die Zuordnung von Maßnahmen zu den Aspekten des Hochwasserrisikomanagements entwickelt (http://www.wasserblick.net/servlet/is/142658/HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf?command=downloadContent&filename=HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf, 24.02.2015). Bei der Zusammenstellung wurden die Maßnahmen aus dem LAWA-Maßnahmenkatalog den EU-Aspekten sowie den EU-Maßnahmenarten zugeordnet. Dieser Katalog wurde im Rahmen des LAWA-Arbeitsprogrammes Flussgebietsbewirtschaftung in den Jahren 2013-2015 fortgeschrieben. Vorgabe war, die Maßnahmen der Wasserrahmenrichtlinie (WRRL) mit denen der Hochwasserrisikomanagementrichtlinie (HWRM-RL) auf Grundlage der EU-Maßnahmenarten in einem ganzheitlichen Katalog abzubilden. Das Hochwasserrisikomanagement ist danach in Anlehnung an den HWRM-Zyklus in folgende EU-Aspekte untergliedert: - Vermeidung (hochwasserbedingter nachteiliger Folgen), Schutz (vor Hochwasser),Vorsorge (für den Hochwasserfall), Regeneration und Überprüfung/Erkenntnisse, Sonstiges. Die LAWA-Handlungsfelder des Hochwasserrisikomanagements sind in der 300er Gruppe des LAWA-Maßnahmenkatalogs enthalten (siehe Anlage 4 der LAWA-Empfehlungen zur Aufstellung von HWRM-Plänen (http://www.wasserblick.net/servlet/is/142658/Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf?command=downloadContent&filename=Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf, 26./27.09.2013)). Im EU-Aspekt Vermeidung werden der EU-Maßnahmenart Vermeidung die LAWA-Handlungsfelder Raumordnungs- und Regionalplanung (301), Festsetzung von Überschwemmungsgebieten (302), Bauleitplanung (303) und angepasste Flächennutzungen (304) zugeordnet. Diese umfassen in der bisherigen LAWA-Strategie den Handlungsbereich Flächenvorsorge mit den Maßnahmen zur Festlegung von Vorrang- und Vorbehaltsgebieten in den Raumordnungs- und Regionalplänen, Festsetzung bzw. Aktualisierung der Überschwemmungsgebiete und Formulierung von Nutzungsbeschränkungen nach Wasserrecht, Anpassung und/oder Änderung der Bauleitplanung bzw. Erteilung baurechtlicher Vorgaben und Maßnahmen zur angepassten Flächennutzung. Der EU-Maßnahmenart Entfernung oder Verlegung wird das LAWA-Handlungsfeld Entfernung oder Verlegung (305) zugeordnet. Dieses umfasst die Entfernung von hochwassersensiblen Nutzungen oder Verlegung in Gebiete mit niedriger Hochwasserwahrscheinlichkeit. Die Maßnahme war in der bisherigen LAWA-Strategie nicht aufgeführt, ist aber dem ehemaligen LAWA-Handlungsbereich Flächenvorsorge zuzuordnen. Der EU-Maßnahmenart Verringerung werden die LAWA-Handlungsfelder hochwasserangepasstes Planen, Bauen, Sanieren (306), Objektschutz (307) und der hochwasserangepasste Umgang mit wassergefährdenden Stoffen (308) zugeordnet. Diese umfassen in der bisherigen LAWA-Strategie die Bauvorsorge, z. B. hochwasserangepasstes Planen, Bauen und Sanieren und die hochwasserangepasste Lagerung wassergefährdender Stoffe und den Teil Objektschutz des Handlungsbereichs technischer Hochwasserschutz, der sich aber besser der Bauvorsorge zuordnen lässt, da es hier um bauliche Schutzaspekte geht. In Deutschland wurde zur Bewertung von Gefahrenquellen, die aus Überflutungen von Anlagen, die unter den Anwendungsbereich der Seveso-II-Richtlinie fallen, 2012 die Technische Regel Anlagensicherheit TRAS 310 Vorkehrungen und Maßnahmen wegen der Gefahrenquellen Niederschläge und Hochwasser eingeführt. Die TRAS 310 findet nun auch auf die unter die Seveso-III-Richtlinie fallenden Anlagen Anwendung. Der EU-Maßnahmenart Sonstige Vorbeugungsmaßnahmen wird das LAWA-Handlungsfeld Sonstige Maßnahmen zur Vermeidung von Hochwasserrisiken (309) zugeordnet. Es umfasst u.a. auch die Erstellung von Konzepten, Studien und/oder Gutachten. Im EU-Aspekt Schutz werden der EU-Maßnahmenart Management natürlicher Überschwemmungen/Abfluss- und Einzugsgebietsmanagement die LAWA-Handlungsfelder natürlicher Wasserrückhalt im Einzugsgebiet (310), natürlicher Wasserrückhalt in der Gewässeraue (311), Minderung der Flächenversiegelung (312), natürlicher Wasserrückhalt in Siedlungsgebieten (313) und Wiedergewinnung von Überschwemmungsgebieten (314) zugeordnet. Diese umfassen in der bisherigen LAWA-Strategie den Handlungsbereich Natürlicher Wasserrückhalt. Hierunter ist die hochwassermindernde Flächenbewirtschaftung, die Gewässer- und Auenrenaturierung und Aktivierung ehemaliger Feuchtgebiete, die Minderung der Flächenversiegelung, das Regenwassermanagement sowie die Wiedergewinnung von natürlichen Rückhalteflächen zu verstehen. Maßnahmen der Relevanz M1 zur Verbesserung des natürlichen Wasserrückhalts für den Hochwassertyp Flusshochwasser in den Bewirtschaftungsplänen nach Wasserrahmenrichtlinie sind ebenfalls Bestandteil des Hochwasserrisikomanagements. Der EU-Maßnahmenart Regulierung des Wasserabflusses werden die LAWA-Handlungsfelder Planung und Bau von Hochwasserrückhaltemaßnahmen (315) und Betrieb, Unterhaltung und Sanierung von Hochwasserrückhaltemaßnahmen (316) zugeordnet. Hierzu zählen aus dem LAWA-Handlungsbereich des technischen Hochwasserschutzes die Aufstellung, Weiterführung, Beschleunigung und/oder Erweiterung der Bauprogramme zum Hochwasserrückhalt inkl. Überprüfung, Erweiterung und Neubau von Hochwasserrückhalteräumen und Stauanlagen sowie der Betrieb, die Unterhaltung und Sanierung von Hochwasserrückhalteräumen und Stauanlagen. Der EU-Maßnahmenart Anlagen im Gewässerbett, an der Küste und in Überschwemmungsgebieten werden die LAWA-Handlungsfelder Deiche, Dämme, Hochwasserschutzwände, mobiler Hochwasserschutz, Dünen, Strandwälle (317) sowie die Unterhaltung von vorhandenen stationären und mobilen Schutzbauwerken (318) zugeordnet. Hierzu zählen aus dem LAWA-Handlungsbereich des technischen Hochwasserschutzes der Ausbau, die Ertüchtigung bzw. der Neubau von stationären und mobilen Schutzeinrichtungen, sowie die Unterhaltung von vorhandenen stationären und mobilen Schutzbauwerken. Der EU-Maßnahmenart Management von Oberflächengewässern werden die LAWA-Handlungsfelder Freihaltung und Vergrößerung der Hochwasserabflussquerschnitte im Siedlungsraum und Auenbereich (319) und Freihaltung der Hochwasserabflussquerschnitte durch Gewässerunterhaltung und Vorlandmanagement (320) zugeordnet. Hierzu zählen aus dem LAWA-Handlungsbereich des technischen Hochwasserschutzes Maßnahmen zur Freihaltung und Vergrößerung des Hochwasserabflussquerschnitts im Siedlungsraum und Auenbereich sowie die Freihaltung des Hochwasserabflussquerschnitts durch Gewässerunterhaltung und Vorlandmanagement. Der EU-Maßnahmenart Sonstige Schutzmaßnahmen wird das LAWA-Handlungsfeld Sonstige Maßnahmen zur Verbesserung des Schutzes gegen Überschwemmungen (321) zugeordnet. Es umfasst alle weiteren Maßnahmen zur Verbesserung des Schutzes gegen Überschwemmungen, die unter den vorab genannten Maßnahmenbereichen des Schutzes nicht aufgeführt sind. Im EU-Aspekt Vorsorge werden der EU Maßnahmenart Hochwasservorhersagen und Hochwasserwarnungen die LAWA-Handlungsfelder Hochwasserinformation und Vorhersage (322) und Einrichtung bzw. Verbesserung von kommunalen Warn- und Informationssystemen (323) zugeordnet. Hierzu zählen aus dem LAWA-Handlungsbereich Informationsvorsorge die Einrichtung bzw. Verbesserung des Hochwassermeldedienstes und der Sturmflutvorhersage sowie von kommunalen Warn- und Informationssystemen. Der EU-Maßnahmenart Planung von Hilfsmaßnahmen für den Notfall/Notfallplanung wird das LAWA-Handlungsfeld Alarm- und Einsatzplanung (324) zugeordnet. Dieses umfasst den LAWA-Handlungsbereich Gefahrenabwehr und Katastrophenschutz und z. B. Planung und Optimierung des Krisen- und Ressourcenmanagements. Der EU-Maßnahmenart Öffentliches Bewusstsein und Vorsorge wird das LAWA-Handlungsfeld Aufklärung und Vorbereitung auf den Hochwasserfall (325) zugeordnet. Dieses LAWA-Handlungsfeld umfasst alle Maßnahmen im Rahmen des LAWA-Handlungsbereichs der Verhaltensvorsorge. Der EU-Maßnahmenart Sonstige Vorsorge wird das LAWA-Handlungsfeld Versicherungen und finanzielle Eigenvorsorge (326) zugeordnet. Dieses umfasst den LAWA-Handlungsbereich Risikovorsorge wie z. B. die finanzielle Absicherung vor allem durch Versicherungen gegen Hochwasserschäden, aber auch die finanzielle Eigenvorsorge durch Bildung von Rücklagen. Im EU-Aspekt Wiederherstellung/Regeneration und Überprüfung werden der EU Maßnahmenart Überwindung der Folgen für den Einzelnen und die Gesellschaft, Beseitigung von Umweltschäden das LAWA-Handlungsfeld Aufbauhilfe und Wiederaufbau, Nachsorgeplanung und Beseitigung von Umweltschäden (327) zugeordnet. Es umfasst alle Maßnahmen der Schadensnachsorge wie z. B. die Planung von Maßnahmen zur Beseitigung von Abfällen oder Umweltschäden und finanzielle Hilfen. Der EU-Maßnahmenart Sonstige Wiederherstellung/Regeneration und Überprüfung wird das LAWA-Handlungsfeld Sonstige Maßnahmen im Rahmen dieses Handlungsbereichs (328) zugeordnet. Darunter sind u. a. Erfahrungen aus Hochwasserereignissen, Versicherungsstrategien und alle sonstigen Maßnahmen zur Wiederherstellung/Regeneration und Überprüfung, die noch nicht abgedeckt sind, zu verstehen. Der EU-Maßnahmenart Sonstiges wird das LAWA-Handlungsfeld Sonstige Maßnahmen (329) zugeordnet. Dieses LAWA-Handlungsfeld umfasst gemäß EU-Maßnahmenliste Untersuchungen und Maßnahmen, die keinem der EU-Aspekte aus der EU-Maßnahmenliste für das Reporting (Anlage 1 der LAWA Empfehlungen zur Aufstellung von HWRM-Plänen) zugeordnet werden können, aber aufgrund von Erfahrungen relevant sind und berücksichtigt werden müssen. Der LAWA-Maßnahmenkatalog beinhaltet außerdem konzeptionelle Maßnahmen. Diese sind Maßnahmen, die nicht nur in einem Gebiet mit potenziell signifikantem Hochwasserrisiko, sondern z. B. in einer gesamten Bewirtschaftungseinheit umgesetzt werden können. Die strategisch-konzeptionellen Maßnahmen werden entsprechend ihrem

inhaltlichen Bezug den jeweiligen EU-Aspekten zugeordnet. Diese sind mit den vergleichbaren konzeptionellen Maßnahmen der WRRL zusammengefasst. Zwischen den Maßnahmenbeschreibungen der WRRL und HWRM gibt es jedoch Unterschiede. Deshalb werden im Folgenden die als konzeptionell identifizierten Maßnahmen zum HWRM hier nochmals aufgeführt (http://www.wasserblick.net/servlet/is/142651/WRRL_2.3.3_Massnahmenkatalog_Anlage_24.01.2014.pdf?command=downloadContent&filename=WRRL_2.3.3_Massnahmenkatalog_Anlage_24.01.2014.pdf, 24.01.2014). Maßnahme 501 Erstellung von Konzeptionen/Studien/Gutachten, Maßnahme 502 Durchführung von Forschungs-, Entwicklungs- und Demonstrationsvorhaben, Maßnahme 503 Informations- und Fortbildungsmaßnahmen, Maßnahme 504 Beratungsmaßnahmen, Maßnahme 505 Einrichtung bzw. Anpassung von Förderprogrammen, Maßnahme 506 Freiwillige Kooperationen, Maßnahme 507 Zertifizierungssysteme, Maßnahme 508 Vertiefende Untersuchungen und Kontrollen, Maßnahme 509 Untersuchungen zum Klimawandel. Alle vorgenannten Maßnahmen des Hochwasserrisikomanagements sind grundsätzlich geeignet, zur Verringerung oder Vermeidung von Risiken bei allen in der HWRM-RL genannten Schutzgütern beizutragen. Die Tabelle des Hintergrundpapiers enthält die möglichen Maßnahmen im HWRM-Plan entsprechend dem LAWA-Maßnahmenkatalog mit Zuordnung zu den EU-Maßnahmenarten und LAWA-Handlungsfeldern. Die LAWA-Handlungsfelder sind im LAWA-Maßnahmenkatalog im Einzelnen erläutert (siehe Anlage 4 der LAWA-Empfehlungen zur Aufstellung von HWRM-Plänen (http://www.wasserblick.net/servlet/is/142658/Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf?command=downloadContent&filename=Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf, 26./27.09.2013)).

Summary of the Flood Extent

Die HWRM-Pläne berücksichtigen die Ausdehnung der Überflutungsgebiete (Überschwemmung und Hochwasserabflusswege) ebenso wie die Gebiete mit dem Potenzial zur Retention von Hochwasser. Sie schlagen in geeigneten Fällen die Unterstützung nachhaltiger Flächennutzungsmethoden, die Verbesserung des Wasserrückhalts und kontrollierte Überflutungen vor. Insbesondere die Aspekte der Bodennutzung im Rahmen der Land- und Forstwirtschaft im Zusammenspiel mit der Wasserwirtschaft, der Raumordnung, der Flächennutzung, des Naturschutzes sowie der Schifffahrt und der Hafeninfrastruktur sind eingeflossen. Als Grundlage für die Maßnahmenplanung auf diesen Gebieten wurden die Gefahren- und Risikokarten unter Betrachtung der lokalen und regionalen Besonderheiten ausgewertet und ermittelt, wo besondere Risiken für die Schutzgüter vorliegen bzw. in welchen Bereichen ein hoher Handlungsbedarf besteht. Die LAWA-Handlungsfelder des Hochwasserrisikomanagements sind in der 300er Gruppe des LAWA-Maßnahmenkatalogs enthalten (siehe Anlage 4 der LAWA-Empfehlungen zur Aufstellung von HWRM-Plänen (http://www.wasserblick.net/servlet/is/142658/Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf?command=downloadContent&filename=Empfehlung%20zur%20Aufstellung%20von%20HWRMPL_mit%20Anlagen.pdf, 26./27.09.2013). Die nachfolgenden Erläuterungen der EU-Maßnahmenarten berücksichtigen den LAWA-Maßnahmenkatalog. Im EU-Aspekt Vermeidung werden der EU-Maßnahmenart Vermeidung die LAWA-Handlungsfelder Raumordnungs- und Regionalplanung (301), Festsetzung von Überschwemmungsgebieten (302), Bauleitplanung (303) und angepasste Flächennutzungen (304) zugeordnet. Diese umfassen in der bisherigen LAWA-Strategie den Handlungsbereich Flächenvorsorge mit den Maßnahmen zur Festlegung von Vorrang- und Vorbehaltsgebieten in den Raumordnungs- und Regionalplänen, Festsetzung bzw. Aktualisierung der Überschwemmungsgebiete und Formulierung von Nutzungsbeschränkungen nach Wasserrecht, Anpassung und/oder Änderung der Bauleitplanung bzw. Erteilung baurechtlicher Vorgaben und Maßnahmen zur angepassten Flächennutzung. Im EU-Aspekt Schutz werden der EU Maßnahmenart Management natürlicher Überschwemmungen/Abfluss- und Einzugsgebietsmanagement die LAWA-Handlungsfelder natürlicher Wasserrückhalt im Einzugsgebiet (310), natürlicher Wasserrückhalt in der Gewässeraue (311), Minderung der Flächenversiegelung (312), natürlicher Wasserrückhalt in Siedlungsgebieten (313) und Wiedergewinnung von Überschwemmungsgebieten (314) zugeordnet. Diese umfassen in der bisherigen LAWA-Strategie den Handlungsbereich Natürlicher Wasserrückhalt. Hierunter ist die hochwassermindernde Flächenbewirtschaftung, die Gewässer- und Auenrenaturierung und Aktivierung ehemaliger Feuchtgebiete, die Minderung der Flächenversiegelung, das Regenwassermanagement sowie die Wiedergewinnung von natürlichen Rückhalteflächen zu verstehen. Maßnahmen der Relevanz M1 zur Verbesserung des natürlichen Wasserrückhalts für den Hochwassertyp Flusshochwasser in den Bewirtschaftungsplänen nach Wasserrahmenrichtlinie sind ebenfalls Bestandteil des Hochwasserrisikomanagements. Der EU Maßnahmenart Regulierung des Wasserabflusses werden die LAWA-Handlungsfelder Planung und Bau von Hochwasserrückhaltemaßnahmen (315) und Betrieb, Unterhaltung und Sanierung von Hochwasserrückhaltemaßnahmen (316) zugeordnet. Hierzu zählen aus dem LAWA-Handlungsbereich des technischen Hochwasserschutzes die Aufstellung, Weiterführung, Beschleunigung und/oder Erweiterung der Bauprogramme zum Hochwasserrückhalt inkl. Überprüfung, Erweiterung und Neubau von Hochwasserrückhalteräumen und Stauanlagen sowie der Betrieb, die Unterhaltung und Sanierung von Hochwasserrückhalteräumen und Stauanlagen.

Summary of the Development

Der Hochwasserrisikomanagement-Plan der FGG Elbe wurde mit dem Bewirtschaftungsplan der FGG Elbe nach WRRL abgestimmt. Entsprechend Art. 9 HWRM-RL wurden beide Richtlinien besonders im Hinblick auf die Verbesserung der Effizienz, den Informationsaustausch und gemeinsame Vorteile für die Erreichung der Umweltziele der WRRL (Art. 4 der WRRL) koordiniert (siehe LAWA- Empfehlungen zur koordinierten Anwendung der EG-HWRM-RL und EG-WRRL). Um bei der Erarbeitung der HWRM-Pläne in Deutschland die notwendige Koordination mit der Fortschreibung der Bewirtschaftungspläne nach WRRL sicherzustellen, wurde vor Beginn der jeweiligen Prozesse von der Bund/Länder-Arbeitsgemeinschaft Wasser (LAWA) mit den Empfehlungen zur koordinierten Anwendung der EG-HWRM-RL und EG-WRRL die o. g. Arbeitshilfe erstellt, die den Koordinierungsbedarf und die Koordinierungsmöglichkeiten benennt und eine strukturierte Vorgehensweise darstellt. Obwohl sich die Ziele beider Richtlinien unterscheiden, sprechen doch beide das Schutzgut Umwelt an. Auch wirken beide Richtlinien in überwiegend identischen Gebietskulissen, den Flussgebietseinheiten. Es ist daher zielführend, die für die Erreichung der Ziele beider Richtlinien vorgesehenen Maßnahmen einander gegenüber zu stellen und auf potenzielle Synergie- bzw. Konfliktpotenziale mit den Zielen der jeweils anderen Richtlinie zu prüfen. Grundsätzlich sind potenzielle Synergien bei der Planung, Priorisierung und Umsetzung von Maßnahmen und deren Wirkung auf die Ziele, bei der Einbeziehung der interessierten Stellen und der Öffentlichkeit unter Berücksichtigung des gemeinsamen Zeitplanes zur Berichterstattung sowie bei der Datenbereitstellung für den Bericht zu erwarten. Inhaltliche Synergien sind im Wesentlichen über die Maßnahmenauswahl in den HWRM-Plänen und den Maßnahmenprogrammen nach WRRL zu erwarten. Potenzielle Konflikte zwischen den Zielen beider Richtlinien wie beispielsweise bei der Umsetzung von Maßnahmen des technischen Hochwasserschutzes, können nicht von vornherein ausgeschlossen werden und können zu einer Anpassung der Zielerreichung oder Fristen gemäß WRRL oder der Maßnahmen für den konkreten Wasserkörper/Gewässerabschnitt nach einer der beiden Richtlinien führen. Dabei ist eine Abwägung im Einzelfall vorzunehmen. Gegebenenfalls ist auch die Inanspruchnahme einer Ausnahme von den Bewirtschaftungszielen zugunsten von notwendigen Maßnahmen des Hochwasserrisikomanagements denkbar. In einem ersten Schritt wurde daher ein gemeinsamer LAWA-Maßnahmenkatalog für die Maßnahmen der HWRM-Pläne und der Bewirtschaftungspläne nach WRRL entwickelt. Bei der Aufstellung dieses gemeinsamen LAWA-Maßnahmenkatalogs fand bereits eine generelle Vorprüfung der angestrebten Maßnahmenwirkungen statt. Alle Maßnahmen bzw. Handlungsfelder des Katalogs wurden einer der folgenden Gruppen zugeordnet: M1: Maßnahmen, die die Ziele der jeweils anderen Richtlinie unterstützen. M2: Maßnahmen, die zu einem Zielkonflikt führen können. Diese werden ggf. im weiteren Planungsprozess einer Einzelfallprüfung unterzogen. M3: Maßnahmen, die für die Ziele der jeweils anderen Richtlinie nicht relevant sind. Die ausführliche Erläuterung dieser Maßnahmengruppen M1, M2 und M3 sowie die Zuordnung der Handlungsfelder zu den Kategorien M1, M2 und M3 sind in den LAWA-Empfehlungen zur koordinierten Anwendung der EG-HWRM-RL und EG-WRRL (http://www.wasserblick.net/servlet/is/142658/VerlinkungspapierWRRL_HWRM-RL.pdf?command=downloadContent&filename=VerlinkungspapierWRRL_HWRM-RL.pdf, 26./27.09.2013) und im Hintergrundpapier (http://www.wasserblick.net/servlet/is/142658/HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf?command=downloadContent&filename=HWRMRL_3.1__Textbausteine_HWRM_Plaene_Hintergrundpapier.pdf, 24.02.2015) dargestellt. Die Maßnahmen, die zu potenziellen Synergien mit den Zielen der WRRL führen (M1- Maßnahmen) sind in der Meldung der Maßnahmen zusammengestellt. Weitere Synergien mit der Bewirtschaftungsplanung nach WRRL in der FGG Elbe wurden durch die gemeinsame Einbeziehung der interessierten Stellen und der Öffentlichkeit unter Berücksichtigung des gemeinsamen Zeitplanes zur Berichterstattung zu beiden Richtlinien erzielt. Dabei erfolgt die Durchführung der strategischen Umweltprüfung zum HWRM-Plan der FGG Elbe zeitgleich zur SUP zum aktualisierten Maßnahmenprogramm der FGG Elbe für den 2. Bewirtschaftungszeitraum der WRRL. Nach dem Hochwasser 2002 wurden in Sachsen im Zeitraum 2003 bis 2005 sogenannte Hochwasserschutzkonzepte (HWSK) für die Fließgewässer in Zuständigkeit des Freistaates als Grundlage und Handlungsrahmen für die Schadensbeseitigung sowie die künftige Verbesserung des Hochwasserrisikomanagements erarbeitet. Die Erarbeitung erfolgte im Auftrag des Freistaates Sachsen durch sach- und fachkundige externe Aufragnehmer. Da die HWSK inhaltlich den Maßgaben der Art. 6 und Art. 7 der HWRM-RL entsprechen, kam die Übergangsregelung nach Art. 13 Abs. 1-3 zur Anwendung.

Summary of Coordination

Die internationale Koordination erfolgte auf mehreren Ebenen, beispielsweise auf Ebene der internationalen Flussgebietseinheiten (IKSR am Rhein, IKSMS an Saar und Mosel, IKSE an der Elbe) bzw. in internationalen Bearbeitungsgebieten. HWRM-Pläne werden auf der Ebene der Flussgebietseinheiten bzw. den Bewirtschaftungseinheiten nach Artikel 3 der HWRM-RL für die Gebiete aufgestellt, in denen im Ergebnis einer vorläufigen Bewertung ein potenzielles signifikantes Hochwasserrisiko besteht oder für die die Erstellung von Hochwassergefahren- und Hochwasserrisikokarten sowie von Hochwasserrisikomanagementplänen gemäß Art 13 Abs. 1 Buchst. b beschlossen wurde. Für Deutschland sind die dafür zuständigen Stellen benannt. Sie gewährleisten eine geeignete Information und Koordination im Rahmen der Erstellung des HWRM-Plans. In den HWRM-Plänen sind keine Maßnahmen enthalten, die in ihrer Wirkung das Hochwasserrisiko für andere Länder flussaufwärts oder flussabwärts im selben Einzugsgebiet oder Teileinzugsgebiet erheblich erhöhen, es sei denn, diese Maßnahmen wurden koordiniert und es wurde zwischen den betroffenen Mitgliedstaaten eine gemeinsame Lösung gefunden (Art. 7 Abs. 4 HWRM-RL). Im HWRM-Plan werden die Schlussfolgerungen aus der vorläufigen Bewertung des Hochwasserrisikos erläutert und in Form einer Übersichtskarte der Flussgebietseinheit dargestellt. Weiterhin werden die Gefahren- und Risikokarten übernommen und ausgewertet. Aufbauend auf dieser Gefahren- und Risikobewertung erfolgen eine Beschreibung der festgelegten angemessenen Ziele des Hochwasserrisikomanagements und eine Zusammenfassung der Maßnahmen und deren Rangfolge, die die Verwirklichung der angemessenen Ziele des Hochwasserrisikomanagements bezwecken. In grenzüberschreitenden Einzugsgebieten erfolgte eine Abstimmung (z. B. bilateral oder im Rahmen der internationalen Flussgebietsgemeinschaften). Das Einzugsgebiet der Elbe erstreckt sich über die Territorien der Tschechischen Republik, der Republik Polen, der Republik Österreich und der Bundesrepublik Deutschland. Daher haben sich diese Staaten darauf verständigt, die Koordinierung der Aufgaben, die sich aus der HWRM-RL ergeben, unter dem Dach der Internationalen Kommission zum Schutz der Elbe (IKSE) zu realisieren. Die internationale Koordinierung erfolgt hierbei in der Arbeitsgruppe Hochwasserschutz und in der internationalen Koordinierungsgruppe ICG sowie durch die Abstimmungen auf Ebene der Delegationen und der Vollversammlung der IKSE. Dieser Aufbau und Ablauf gewährleistet, dass der nötige fachliche Prozess umfassend adressiert und abgearbeitet wird und gleichzeitig die fachpolitischen Zielstellungen vollumfänglich berücksichtigt werden. Durch die Öffnung der IKSE auch in Richtung der Öffentlichkeit, der Verbände sowie anderer bedeutsamer Organisationen im Einzugsgebiet wird zudem sichergestellt, dass die internationale Koordinierung sowohl vom Verfahren als auch vom Ergebnis her gesamtgesellschaftlich repräsentativ ist. Auf internationaler Ebene wurde sich unter dem Dach der IKSE darauf verständigt, einen

gemeinsamen Hochwasserrisikomanagementplan für die gesamte internationale Flussgebietseinheit zu erstellen. Mit dem Internationalen Hochwasserrisikomanagementplan für die Flussgebietseinheit Elbe werden die Maßnahmen in der Tschechischen Republik und Deutschland dargestellt, für die es teilweise nationalstaatlich übergreifende Lösungen geben muss. Dort, wo geboten, werden auch polnische und österreichische Aspekte berücksichtigt mit dem Ziel, das einheitliche bzw. koordinierte Vorgehen in der internationalen Flussgebietseinheit Elbe darzustellen. Der Internationale Hochwasserrisikomanagementplan für die Flussgebietseinheit Elbe ist auf der Internetseite der IKSE veröffentlicht (http://www.ikse-mkol.org/) Der gemeinsame Hochwasserrisikomanagementplan der IKSE für die gesamte internationale Flussgebietseinheit folgt den umfassenden Anforderungen der HWRM-RL, insbesondere dem Grundsatz der Solidarität gemäß Artikel 7 Absatz 4 der HWRM-RL. Gerade das Solidaritätsprinzip und dessen Umsetzung zwischen Oberlieger und Unterlieger spielt in der internationalen Flussgebietseinheit Elbe eine große Rolle und wird auch in den Inhalten dieses Plans als Grundsatz fest verankert und in der Realität praktiziert. Als Beleg für ein internationales Abkommen zur Zusammenarbeit und Koordination innerhalb der IKSE sind die Vereinbarung über die Internationale Kommission zum Schutz der Elbe unter http://www.ikse-mkol.org/fileadmin/download/IKSE/Vereinbarung/D/Vereinbarung_ueber_IKSE.pdf , das Protokoll zu der Vereinbarung vom 8. Oktober 1990 zwischen den Regierungen der Bundesrepublik Deutschland, der Tschechischen und Slowakischen Föderativen Republik und der Europäischen Wirtschaftsgemeinschaft über die Internationale Kommission zum Schutz der Elbe unter http://www.ikse-mkol.org/fileadmin/download/IKSE/Vereinbarung/D/Protokoll_zur_Vereinbarung_ueber_IKSE.pdf und die Geschäftsordnung der Internationalen Kommission zum Schutz der Elbe unter http://www.ikse-mkol.org/fileadmin/download/IKSE/Vereinbarung/D/IKSE-Geschaeftsordnung_10-2003.pdf heranzuziehen.

Summary of the Climate Change

Die bisherigen Untersuchungen des Langzeitverhaltens von meteorologischen und hydrologischen Zeitreihen belegen, dass die Trends von Kenngrößen des Niederschlags und des Abflusses in einzelnen Einzugsgebieten sehr unterschiedlich sein können. Regionale Detailuntersuchungen auf Flussgebietsebene sind daher notwendig. Die Auswirkungen werden regional unterschiedlich verteilt sein, so dass in großen Einzugsgebieten, wie dem Einzugsgebiet der Elbe, eine Betrachtung von Teilgebieten entsprechend den länderspezifischen Gegebenheiten notwendig ist. Auch in Zukunft wird die Änderung des Klimas in Deutschland mit Folgen für die Wasserwirtschaft weitergehen, da sich nach den Erkenntnissen der Klimaforschung der Temperaturanstieg fortsetzen wird. Insgesamt wird tendenziell von der Erhöhung der Niederschläge im Winter, dem Anstieg der Häufigkeit und Intensität von Hochwasserabflüssen in oberirdischen Gewässern, einem Meeresspiegelanstieg und höheren Sturmflutwasserständen bezogen auf das Hochwasserrisikomanagement ausgegangen. Angesichts der bestehenden Unsicherheiten der Klimamodelle können Aussagen für die mögliche zukünftige Entwicklung von Extremwerten des Niederschlags und davon abhängig der Hochwassersituationen bislang nur mit erheblichen Bandbreiten getroffen werden. Grund hierfür ist u.a. die große Variabilität und Komplexität des Niederschlags. Die Ergebnisbandbreite wird umso größer, je kleiner die betrachtete Region ist und je seltener das jeweils betrachtete Extremereignis auftritt. In Kombination mit globalen und regionalen Modellen sowie unterschiedlichen Emissionsszenarien fallen die Projektionen sehr unterschiedlich aus. Ähnliches gilt für die regional unterschiedliche Entwicklung der Sturmflutwasserstände entlang den Küsten. Auch bei weiteren Fortschritten der Klimaforschung werden zukünftige Projektionen als Bandbreite anzugeben sein. Durch den Klimawandel ist auf lange Sicht in Deutschland von signifikanten Veränderungen im Niederschlags- und Verdunstungsregime sowie von einem stärkeren Meeresspiegelanstieg und höheren Sturmflutwasserständen auszugehen. Je nach Ausmaß kann dies eine unmittelbare Auswirkung auf das Hochwasserrisiko im Binnenland und an den Küsten haben. Höhere Temperaturen bewirken einem Meeresspiegelanstieg durch das Abschmelzen der auf dem Land gebundenen Eismassen und eine Ausdehnung der oberen Wasserschichten in den Ozeanen und Meeren. Der Meeresspiegelanstieg und in der Folge höhere Sturmflutwasserstände haben direkte Auswirkungen auf den Küstenschutz, in dem mit höheren Belastungen der Küsten und den Schutzanlagen und damit eine Zunahme des Risikos zu rechnen ist. Die wissenschaftlichen wie fachlichen Grundlagen und Erkenntnisse zur Beobachtung und Berechnung der Auswirkungen der Klimaveränderung auf den gesamten Wasserhaushalt sind daher kontinuierlich weiterzuentwickeln. Notwendige Vorkehrungen und wasserwirtschaftliche Anpassungsmaßnahmen können so rechtzeitig in die Planungen und ihre Umsetzung einfließen. Unabhängig davon wie das Klima in der Zukunft aussehen wird, gibt es viele Maßnahmen und Handlungsoptionen, die für die Verbesserung des Hochwasserrisikomanagements ohnehin nützlich sind. Dies sind insbesondere wasserwirtschaftliche Anpassungsmaßnahmen, die Bandbreiten tolerieren und außerdem flexibel, nachsteuerbar und robust sind. Diese Maßnahmen werden schon heute so konzipiert, dass eine kostengünstige Anpassung möglich ist, wenn zukünftig die Effekte des Klimawandels genauer bekannt sein werden. Die Passgenauigkeit einer Anpassungsmaßnahme wird grundsätzlich regelmäßig überprüft. Die Anpassungsmaßnahmen können in einem weiten Spektrum von Klimafolgen wirksam sein. Maßnahmen mit Synergieeffekten für unterschiedliche Klimafolgen sollten bevorzugt werden. Bei der Umsetzung der Maßnahmen entstehen wie bei allen mit materiellem Aufwand verbundenen Tätigkeiten Treibhausgasemissionen, die jedoch als untergeordnet eingeschätzt werden. Alle Maßnahmen des Hochwasserrisikomanagements haben bei entsprechend abgestimmter Umsetzung keine nachteiligen Auswirkungen auf den Wasserhaushalt und unterstützen soweit wie möglich die Ziele der Wasserrahmenrichtlinie. Generell leisten alle Maßnahmen des Hochwasserrisikomanagements auch einen Beitrag zur Anpassung an den Klimawandel, da sie dazu dienen, neue Risiken zu vermeiden, bestehende Risiken zu verringern sowie die nachteiligen Folgen während und nach einem Hochwassergeschehen zu verringern. Damit tragen die Maßnahmen dazu bei, die Folgen der durch den Klimawandel möglichen verschärften Hochwasserereignisse und Sturmfluten zu begrenzen. Durch den projizierten Klimawandel ist auf lange Sicht auch im Elbeeinzugsgebiet von signifikanten Veränderungen im Niederschlags- und Verdunstungsregime auszugehen. Die Maßnahmen im deutschen Anteil des Elbeeinzugsgebiets tragen den zu erwartenden Herausforderungen des Klimawandels bereits Rechnung (siehe Kapitel 1.5 HWRM-Plan der FGG Elbe).

Summary of Cost/Benefit

Ökonomische Bewertungen sind regulärer Bestandteil des deutschen Hochwasserrisikomanagements. Dies reflektiert unter anderem die Idee, dass die Verwendung von ökonomischen Instrumenten, Methoden und Verfahren ein effektives Management des Hochwasserrisikos unterstützen kann, wie beispielsweise Entscheidungsfindung, Verletzbarkeits- und Risikobewertung, die Auswertung und Priorisierung von Maßnahmen sowie die Finanzierung von HWRM-Maßnahmen. Der Prozess der Maßnahmenidentifizierung und -auswahl bildet die Basis für ein erfolgreiches HWRM. In Deutschland verläuft dieser Prozess in der Regel dezentral unter Berücksichtigung der Akteure des Hochwasserrisikomanagements; dabei ist eine Vielzahl von Regelungen und Vorgaben zu beachten. Ökonomische Bewertungen im weitesten Sinne sind ein Bestandteil dieser Rahmenbedingungen und Einflussfaktoren des HWRM-Prozesses. Die Anforderungen der HWRM-Richtlinie trafen in Deutschland somit auf ein bestehendes System des Hochwasserrisikomanagements. Dennoch hat die Umsetzung von Anforderungen Optimierungen des bestehenden Systems sowie der planerischen Abläufe mit sich gebracht. So wurden gemäß Art. 6 der HWRM-RL Hochwasser-Risikokarten erstellt und somit besonders gefährdete Gebiete transparent für alle Beteiligten ausgewiesen. Dies bildet die Grundlage für die Systematisierung des bestehenden und fortlaufenden Prozess der gemeinsamen Begegnung des Hochwasserrisikos über lokale und regionale Grenzen hinweg. Gemäß dem internationalen HWRM-Plan der FGE Elbe sind grenzüberschreitende Maßnahmen geplant, die dazu beitragen, beim Unterliegerland das Hochwasserrisiko nachhaltig zu verringern. Dies gilt in besonderem Maße für die Hochwasservorhersage-, Warn- und Informationssysteme aber auch für Maßnahmen des Hochwasserrückhalts und der gezielten Scheitelkappung, deren risikomindernde Wirkung eindrucksvoll während der relevanten Hochwasserereignisse nach 2002 unter Beweis gestellt werden konnte. Für die ökonomische Bewertung dieser Maßnahmen stehen verschiedene Methoden zur Verfügung. Unter Anderem sind dies die Kosten-Nutzen-Bewertung, Kostenvergleichsrechnungen, Folgenabschätzungen, Machbarkeitsstudien, Expertenwissen und Priorisierungsschemata gem. CIS-Eco-Dokument (http://ec.europa.eu/environment/water/flood_risk/pdf/WGF_Resource_doc.pdf).

Summary of the Consultation

Wie die WRRL fordert auch die HWRM-RL eine aktive Einbeziehung der interessierten Stellen und Information der Öffentlichkeit. Dabei haben die Mitgliedstaaten nach Art. 10 Abs. 1 der HWRM-RL der Öffentlichkeit Zugang zur ersten Bewertung des Hochwasserrisikos, zu den Hochwassergefahrenkarten, den Hochwasserrisikokarten und den Hochwasserrisikomanagementplänen zu ermöglichen. Die zuständigen Behörden haben nach § 79 WHG die Bewertung des Hochwasserrisikos, die Gefahrenkarten und Risikokarten und die HWRM-Pläne zu veröffentlichen und die aktive Beteiligung der interessierten Stellen bei der Aufstellung der Risikomanagementpläne zu fördern. In der FGG Elbe wurde zur vorläufigen Bewertung des Hochwasserrisikos, der Bestimmung der Risikogebiete und der Inanspruchnahme von Übergangsmaßnahmen 2011 und den Hochwassergefahren- und -risikokarten 2013 ein Bericht/Broschüre erarbeitet und der Öffentlichkeit über die Homepage www.fgg-elbe.de zur Verfügung gestellt. Zudem erfolgt die Veröffentlichung der Hochwassergefahren- und -risikokarten über die jeweiligen Bundesländer und zentral über die Bund-Länder-Informations- und Kommunikationsplattform www.wasserblick.net sowie über die internationale, interaktive Karte der IKSE (www.ikse-mkol.org). Die aktive Beteiligung der interessierten Stellen in der FGG Elbe fand überwiegend auf Ebene der Bundesländer statt (Tabelle 5.3 HWRM-Plan FGG Elbe). Zudem fanden mehrere Informationsveranstaltungen und Workshops auf Ebene der FGG Elbe (Tabelle 5.1 HWRM-Plan FGG Elbe), wie auch der IKSE (Kapitel 5.3 HWRM-Plan IKSE) statt. Informationen sind ebenfalls auf den Internetseiten der für die Umsetzung der HWRM-RL zuständigen Behörden in den Anrainerländern zu erhalten. Die Erarbeitung der Hochwasserrisikomanagementpläne erforderte eine aktive Beteiligung der interessierten Stellen. Interessierte Stellen sind, neben den für die Aufstellung und Umsetzung der HWRM-Pläne zuständigen Behörden und den kommunalen Gebietskörperschaften, insbesondere anerkannte Verbände (z. B. Land- und Forstwirtschaft, Umweltverbände, Organisationen des Kulturgüterschutzes, maßgebliche Vertreter der Wirtschaft und des Handels) sowie weitere Interessensgruppen. Diese wurden in geeigneter Form bei der Aufstellung angemessener Ziele und der Aufstellung des Maßnahmenplanes sowie der Priorisierung von Maßnahmen einbezogen. Insbesondere wurden im Rahmen der Beteiligung der interessierten Stellen die für die unterschiedlichen Maßnahmen nach LAWA-Maßnahmenkatalog verantwortlichen Stellen bei der Hochwasserrisikomanagementplanung beteiligt. Erfahrungen mit der Beteiligung der interessierten Stellen und der Organisation eines solchen Prozesses liegen beispielsweise aus der Erstellung von Hochwasserschutzkonzepten, Hochwasseraktionsplänen, Hochwasserschutzplänen und der Umsetzung der WRRL vor. Auf der Basis dieser Erkenntnisse konnte der Beteiligungsprozess an die spezifischen Anforderungen der HWRM-RL angepasst werden. Für die Beteiligung interessierter Stellen wurden nach Möglichkeit Informations- und Diskussionsforen genutzt. Sofern dies nicht möglich war, erfolgten eine geeignete Information interessierter Stellen und die Möglichkeit zur Stellungnahme zu den Entwürfen der Zielbestimmung sowie der Maßnahmenplanung im Beteiligungsverfahren. Bestehende Kooperations- und Beteiligungsstrukturen beispielweise aus der Umsetzung der WRRL oder im Bereich des Hochwasserrisikomanagements (z. B. Hochwasserpartnerschaften) wurden soweit sinnvoll genutzt. Für diesen Hochwasserrisikomanagementplan nach § 75 des Wasserhaushaltsgesetzes ist auf Grundlage von § 14b, Abs. 1 Nr. 1 in Verbindung mit Anlage 3 Nr. 1.3 des Gesetzes über die Umweltverträglichkeitsprüfung (UVPG) eine Strategische Umweltprüfung (SUP) durchgeführt worden. Mit der SUP wurde gewährleistet, dass aus der Durchführung von Hochwasserrisikomanagementplänen resultierende Umweltauswirkungen bereits frühzeitig bei der Ausarbeitung und vor der Annahme des Plans systematisch berücksichtigt sind. Zentrales Element der SUP ist der Umweltbericht in dem u. a. die voraussichtlich erheblichen Umweltauswirkungen des Hochwasserrisikomanagementplans auf die in § 2 Abs. 1 Satz 2 UVPG genannten Schutzgüter entsprechend den Vorgaben des § 14g UVPG ermittelt, beschrieben und bewertet wurden. Gegenstand der Behörden- und Öffentlichkeitsbeteiligung im Rahmen der Strategischen Umweltprüfung (SUP) war der Entwurf des Hochwasserrisikomanagementplans und der Entwurf des Umweltberichts. Durchgeführt wurde das Beteiligungsverfahren von den zuständigen Behörden der Bundesländer. Der Entwurf des Umweltberichts der FGG Elbe wurde gemeinsam mit dem Entwurf des Managementplans am 22.12.2014 öffentlich ausgelegt und im Internet unter www.fgg-elbe.de für 6 Monate zur Stellungnahme bereitgestellt.

Summary of the Progress
Der HWRM-Plan enthält eine Beschreibung der Umsetzung. Sie stellt dar, wie die Fortschritte bei der Umsetzung des Plans überwacht werden. Für Deutschland sind in den LAWA-Empfehlungen zur Aufstellung von HWRM-Plänen (2013), Anlage 3, die Handlungsfelder entsprechend den EU-Maßnahmenarten aufgelistet. Dort sind die Zuständigkeiten, Ziele, Bestandserhebungen, Maßnahmen und die mögliche Umsetzung definiert, es gibt somit klare Wege und Vorgehensweisen. Im Rahmen der turnusmäßigen Überprüfung des HWRM-Plans wird die Umsetzung der im Plan genannten Maßnahmen vollständig kontrolliert und dokumentiert. Die Überwachung der Umsetzung in der FGG Elbe erfolgt durch die Feststellung und Fortschreibung des Status der Maßnahmen. Dies erfolgt im Rahmen von technischen oder rechtlichen Überwachungsvorschriften und insgesamt nicht zuletzt auch mit der Fortschreibung des Plans im 2. Zyklus der HWRM-RL.

http://www.umwelt.sachsen.de/umwelt/wasser/8214.htm	Das Forschungsprojekt KliWES untersucht die Auswirkungen der prognostizierten Klimaänderungen auf den Wasser- und Stoffhaushalt in den Einzugsgebieten der sächsischen Gewässer. Mit komplexen Modellen wird für den Ist-Zustand sowie für ausgewählte Landnutzungs- und Klimaszenarien sachsenweit der Wasserhaushalt berechnet. KliWES besteht aufgrund seiner Komplexität aus mehreren Teilprojekten.

Measure types

M11	No Action, No measure is proposed to reduce the flood risk in the APSFR or other defined area
M21	Prevention, Avoidance, Measure to prevent the location of new or additional receptors in flood prone areas, such as land use planning policies or regulation
M22	Prevention, Removal or relocation, Measure to remove receptors from flood prone areas, or to relocate receptors to areas of lower probability of flooding and/or of lower hazard
M23	Prevention, Reduction, Measure to adapt receptors to reduce the adverse consequences in the event of a flood actions on buildings, public networks, etc.
M24	Prevention, Other prevention, Other measure to enhance flood risk prevention (may include, flood risk modelling and assessment, flood vulnerability assessment, maintenance programmes or policies etc.)
M31	Protection, Natural flood management / runoff and catchment management, Measures to reduce the flow into natural or artificial drainage systems, such as overland flow interceptors and / or storage, enhancement of infiltration, etc and including in-channel , floodplain works and the reforestation of banks, that restore natural systems to help slow flow and store water.
M32	Protection, Water flow regulation, Measures involving physical interventions to regulate flows, such as the construction, modification or removal of water retaining structures (e.g., dams or other on-line storage areas or development of existing flow regulation rules), and which have a significant impact on the hydrological regime.
M33	Protection, Channel, Coastal and Floodplain Works, Measures involving physical interventions in freshwater channels, mountain streams, estuaries, coastal waters and flood-prone areas of land, such as the construction, modification or removal of structures or the alteration of channels, sediment dynamics management, dykes, etc.
M34	Protection, Surface Water Management, Measures involving physical interventions to reduce surface water flooding, typically, but not exclusively, in an urban environment, such as enhancing artificial drainage capacities or though sustainable drainage systems (SuDS).
M35	Protection, Other Protection, Other measure to enhance protection against flooding, which may include flood defence asset maintenance programmes or policies
M41	Preparedness, Flood Forecasting and Warning, Measure to establish or enhance a flood forecasting or warning system
M42	Preparedness, Emergency Event Response Planning / Contingency planning, Measure to establish or enhance flood event institutional emergency response planning
M43	Preparedness, Public Awareness and Preparedness, Measure to establish or enhance the public awareness or preparedness for flood events
M44	Preparedness, Other preparedness, Other measure to establish or enhance preparedness for flood events to reduce adverse consequences
M51	Recovery and Review (Planning for the recovery and review phase is in principle part of preparedness), Individual and societal recovery, Clean-up and restoration activities (buildings, infrastructure, etc) Health and mental health supporting actions, incl. managing stress Disaster financial assistance (grants, tax), incl. disaster legal assistance, disaster unemployment assistance Temporary or permanent relocation Other
M52	Recovery and Review, Environmental recovery, Clean-up and restoration activities (with several sub-topics as mould protection, well-water safety and securing hazardous materials containers)
M53	Recovery and Review, Other, Other recovery and review Lessons learnt from flood events Insurance policies
M61	Other
